The following is an examiner's statement of reasons for allowance:

The prior art of record neither shows nor suggests all of the elements of claim 1 in combination and particularly:

"flat reflective type polarizing plates as polarizers/analyzers for the reflective type image display devices which, by their diffraction function, reflect primary light polarized in a specified direction and transmit secondary light polarized in a direction virtually perpendicular to the specified direction; and

auxiliary analyzers which transmit either the primary polarized light or the secondary polarized light on an exit side of the reflective type polarizing plates,

wherein:

the color combining unit includes a color combining and prism and

three color light components resulting from color separation by the color separation unit reach the reflective type image display devices through the reflective type polarizing plates and the reflected light which constitutes an optical image made by
